

PRESS RELEASE

ADEMCO MAKES MOBILE PHONES THE KEY TO SECURITY

Release Date: 9 April 2010

SINGAPORE - Mobile phone users can now enjoy the hands-free convenience of locking and unlocking their doors and disabling alarms, with **Ademco's** launch of a new Bluetooth enabled wireless technology.

Eliminating the hassle of fumbling through pockets and bags for different keys, all users need to do is register their phone with an e-KEY unit installed at the entry point, and their doors will lock and unlock automatically as they walk out of or into range. The signal range can be set at 1m, 3m, 10m or 20m.

With its unique patent pending Proximity Meter, e-Key can detect the phone's presence even if it's in a bag or pocket, or while users are talking on the phone. This advanced hands-free technology works on any Bluetooth device without having to install any software.

e-Key can be installed at any electronic gate, door, vehicle entry, lift control or alarm systems at both residential and commercial buildings. As each Bluetooth device can register up to 20 e-Key units, users can convert their phone into a key for all their locks.

e-Key comes in a variety of models for different applications and specific security needs, ranging from complete hands-free access to PIN verification or a push-button function at the entry point.

Priced from S\$600, eKey is available exclusively at **Ademco (Far East) Pte Ltd**. For enquiries, contact 6224 7377.
